**KIRIRI WOMEN'S UNIVERSITY OF SCIENCE AND TECHNOLOGY**  
**UNIVERSITY EXAMINATIONS, 2023/2024 ACADEMIC YEAR**  
**SECOND YEAR, FIRST SEMESTER EXAMINATION**  
**FOR THE DEGREE OF BACHELOR OF SCIENCE**  
**(MATHEMATICS)**

**KMA 205 - BASIC NUMBER THEORY**

Date: 15<sup>th</sup> December 2021  
Time: 11.30m – 1.30pm

**INSTRUCTIONS TO CANDIDATES**

**ANSWER QUESTION ONE (COMPULSORY) AND ANY OTHER TWO QUESTIONS**

**QUESTION ONE (30 MARKS)**

- a) Explain with examples the difference between the following terms as used in number theory
- (i) Prime numbers and composite numbers
  - (ii) Rational numbers and integers. (8 Marks)
- b) Show that if  $\frac{d}{a}$  and  $\frac{d}{b}$ , then  $\frac{d}{ra \pm sb}$  (4 Marks)
- c) Prove that every composite integer  $n$  has a prime divisor  $p$  such that  $1 < p < \sqrt{n}$ , hence if an integer  $n$  has no prime divisor between 1 and  $\sqrt{n}$ , then  $n$  must be prime. (4 Marks)
- d) For positive integers 485 and 625, show that  $(485, 625) = 5$  (4 Marks)
- e) Prove that if  $\frac{n}{ab}$  and  $n$  and  $a$  are coprime, then  $\frac{n}{b}$  (5 Marks)
- f) State the Wilson's theorem (2 Marks)
- g) Solve for  $x^2 + y^2 \equiv 0 \pmod{3}$  (3 Marks)

**QUESTION TWO (20 MARKS)**

- a) Find all the right-angled triangles with integer sides and a perimeter of 240 (12 Marks)
- b) Show that  $(723, 387) = 3$  and find values of  $x$  and  $y$  such that  $723x + 387y = 3$  (8 Marks)

**QUESTION THREE (20 MARKS)**

- a) If  $a \equiv b \pmod{m}$  and  $c \equiv d \pmod{m}$ , show that  $a \pm c \equiv b \pm d \pmod{m}$  (4 Marks)
- b) Solve  $x \equiv 4 \pmod{21}$  and  $x \equiv 13 \pmod{30}$  simultaneously (8 Marks)
- c) Find the solutions of the linear Diophantine equation  $109x + 87y = 50001$  (8 Marks)

**QUESTION FOUR (20 MARKS)**

- a) Define pseudo-prime (2 Marks)
- b) State the Fermat's theorem hence find the order of  $2 \pmod{167}$  (12 Marks)
- c) Prove that if  $(a, b) = 1$ , the equation  $ax + by = c$  can be solved in integers. If  $x_0, y_0$  is one of the solution, then the general solution is  $x = x_0 + bt$ ,  $y = y_0 - at$  where  $t$  is an arbitrary integer. (6 Marks)

**QUESTION FIVE (20 MARKS)**

- a) State Helly's theorem (4 Marks)
- b) Solve  $3x - 5y + 7z = 12$ ,  $5x + 9y - 11z = 40$  by eliminating  $z$  and solve the linear Diophantine equation obtained. (12 Marks)
- c) Show that  $\sqrt{689}$  is a prime number (4 Marks)
